CALIFORNIA STATE UNIVERSITY **LONG BEACH**

Earn Your Master of Science in **INFORMATION SYSTEMS**

Learn the latest technology and become a specialist in cybersecurity

There is a high demand for well-trained information systems and technology professionals in a wide range of areas including computer systems design, software publishing, government, civil services, and more. IT-related job categories are forecasted to see a 12% increase through 2024 according to the Bureau of Labor Statistics.

The Master of Science in Information Systems (MSIS) degree program at California State University, Long Beach (CSULB) helps students to master the latest technology used to organize and manage digital information. Located in Southern California's technology corridor—one of the world's centers of innovation—CSULB's MSIS program provides the advanced training, technical skills, and competitive advantages that employers seek when hiring IT professionals.

FEATURES AND BENEFITS
- Designated as a STEM degree program by the U.S. Department of Homeland Security
- Analysis of digital transformation, data analytics, cybersecurity, and privacy
- Development of a business model for technology-based start-ups
- Focus on protection of data, software, and resources
- Flexible program schedule options for full-time or part-time students
