

Railway Timetable Optimization in Europe

CHRISTIAN LIEBCHEN

PROFESSOR OF TRANSPORTATION MANAGEMENT
TECHNICAL UNIVERSITY OF APPLIED SCIENCES WILDAU

Which model could be used for which type of company? And how to avoid the typical pitfalls of R&D projects?

In the presentation, we will touch on three major aspects of railway timetabling. First, how is the railway sector organized in general in Europe (and in a bit more detail in Germany), and which types of companies are playing which roles? Second, regarding timetables, which of the different proposed optimization models fit best to which types of companies in the European railway market? Finally, more general, we present selected do's & don'ts for optimization R&D projects, in particular in the railway business.
